MONTANA HIGHWAY PLANNING SURVEY

PREFACE TO ROAD LOG

The 1948 Road Log introduces the revised Federal Aid Interstate, Federal Aid Primary, and Federal Aid Secondary project and control section numbering system.

Under the new numbering system route numbers begin at the west and progress easterly. The Interstate System was assigned the numbers 1 to 9, with 1 to 3 being designated at present, and numbers 4 to 9 being reserved for future expansion. The Federal Aid Primary System routes were assigned the numbers 10 to 59. In each group of ten numbers the first seven were used, such as 10, 11, 12, 13, 14, 15, and 16, with 17, 18, and 19 being reserved for future expansion of the system.

On the Federal Aid Secondary System, routes were numbered consecutively from 1 up in each county. All routes are numbered by county number; for example, if Route 1 continues from one county into another it is also Route 1 in both counties, or in as many counties as the route traverses. Counties were carefully numbered so that there were no duplications of route numbers within a county.

EXAMPLE - 5601 would be Yellowstone County, Secondary Route 1.

The following tables show lengths of various projects comprising the Montana Federal Aid and Federal Aid Secondary Systems. Supplementing this information are tables showing all other roads constructed by the State or Public Roads Administration, a tabulation showing the lengths of all Forest Highway Routes, and the Local and Municipal mileages.

These mileages have been computed to determine route, construction and maintenance lengths, all under the several administrative areas. All construction and contract data are for projects prior to January 1, 1949.

The Log includes data regarding surface types and widths, and surface and base thicknesses. Minor changes in these items within a project have not been shown, the predominant characteristics having been used.

All mileages shown, including projects under contract but not completed, the route length, the surface types, widths, and thicknesses shown are those representing the work as it will be when completed.

Following the preface, maps showing route numbers, project control and control section numbers are included to clarify the new numbering system. Preceeding the maps is a tabulation cross referencing the old and new routes.

EXPLANATION OF COLUMN HEADINGS IN ROAD LOG

Column 1. LOCATION & COUNTY - This column identifies Counties, Municipalities, Forest Highway Routes, Junctions, and other pertinent location data.

Column 2. OLD ROUTE NUMBER - This column gives the old route number as used until January 1, 1949.

Column 3. NEW PROJECT NUMBER - Under the new numbering system the Federal Aid Primary routes have been divided into projects, or route sections. These projects will supersede the present projects as shown cross referenced in Column 5 in the Log. These projects will be used for administrative purposes. The four digit code for identifying projects is divided as follows:- Numbers 0 to 5 in the first column are reserved to indicate the route is on the Federal Aid Secondary System only. Numbers 6 and 7 will be assigned to the future Federal Aid Urban System. Number 8 indicates the Federal Aid Interstate System, and number 9 indicates the Federal Aid Primary System. The second and third digit indicates route number, and the fourth digit indicates the route section number.
EXAMPLE - 8011 would be Interstate Route 1, Route section 1.

Column 4. SECTION CONTROL NUMBER - On the Primary System this number will be used for administrative and maintenance purposes and will follow the route section in consecutive order. The four digit control section number is divided as follows: The first two digits indicate the county number, the third and fourth digits indicate the control section number. EXAMPLE 5610 - the first two digits indicate Yellowstone County and the second two digits control section number 10. The latter two digits will be consecutive on the route throughout a county. EXAMPLE - 5610, 5611, 5612, etc. On the Secondary System the Control Section numbers are used as follows:- The first two digits indicate the county number, the third and fourth digits indicate the Secondary Route number. On the Secondary System this four digit number will be the same as the project number. EXAMPLE 5601 - the first two digits indicate Yellowstone County and the third and fourth digits represent route number 1 in that county.

Column 5. PROJECT NUMBER - This column carries the old project number.

Column 6. YEAR BUILT - This column shows the date the last construction was completed; also, where the number is followed by an asterisk (*), it indicates the work was financed by 100% State funds.

Column 7. REMARKS - This column is used as a reference for explanatory notes:

B - Project under construction
D - Data from surveys, through Plans Department
Y & T - Type of junction as shown in accompanying diagrams at the end of the preface. Seven, eight and nine will be used for other explanatory remarks.

Column 8. SURFACE TYPE - The letters designating the surface type are those used in the yearly S. M. Tables and are explained as follows:-

A - Primitive Road

An unimproved route (on which there is no public maintenance) usable by 4-wheel vehicles and publicly traveled by small numbers of vehicles.

B - Unimproved Road

A road using the natural surface and maintained to permit bare passability for motor vehicles, but not conforming to the requirements for a graded and drained earth road. The road may have been bladed and minor improvements may have made locally.

C - Graded and Drained Earth Road

A road of natural earth alined and graded to permit reasonably convenient use by motor vehicles and drained by longitudinal and transverse drainage systems (natural or artificial) sufficiently to prevent serious impairment of the road by normal surface water, with or without dust palliative treatment or a continuous course of special borrow material to protect the new roadbed temporarily and to facilitate immediate traffic service.

D - Soil-Surfaced Road

A road of natural soil, the surface of which has been improved to provide more adequate traffic service by the addition of (1) a course of mixed soil having A-1 or A-2 characteristics, such as sand-clay, soft shale or topsoil, or (2) an admixture such as bituminous material, portland cement, calcium chloride, sodium chloride, or fine granular material (sand or similar material).

E - Gravel or Stone Road

A road the surface of which consists of gravel, broken stone, slag, chert, caliche, iron ore, shale, chat, disintegrated rock or granite, or other similar fragmental material (coarser than sand) with or without sand-clay, bituminous, chemical or portland cement stabilizing admixture or light penetration of oil or chemical to serve as a dust palliative.

F - Bituminous Surface-Treated Road

An earth road, a soil-surfaced road, or a gravel or stone road to which has been added by any process a bituminous surface course, with or without a seal coat, the total compacted thickness of which is less than one inch. Seal coats include those known as chip seals, drag seals, plant-mix seals and rock asphalt seals.

G - Mixed Bituminous Road

A road the surface course of which is one inch or more in compacted thickness composed of gravel, stone, sand or similar material, mixed with bituminous material under partial control as to grading and proportions.

PREFACE TO ROAD LOG (Continued)

Column 8. SURFACE TYPE (Continued)

H - Bituminous Penetration Road

A road the surface course of which is one inch or more in compacted thickness composed of gravel, stone, sand, or similar material bound with bituminous material introduced by downward or upward penetration.

I - Bituminous Concrete, Sheet Asphalt or Rock Asphalt Road

A road on which has been constructed a surface course one inch or more in compacted thickness consisting of bituminous concrete or sheet asphalt, prepared in accordance with precise specifications controlling gradation, proportions and consistency of composition, or of rock asphalt. The surface course may consist of combinations of two or more layers such as a bottom and a top course, or a binder and a wearing course.

J - Portland Cement Concrete Road

A road consisting of portland cement concrete with or without a bituminous wearing surface less than one inch in compacted thickness.

K - Brick Road

A road consisting of paving brick with or without a bituminous wearing surface less than one inch in compacted thickness.

L - Block Road

A road consisting of stone block, wood block, asphalt block or other form of block, except paving brick, with or without a bituminous wearing surface less than one inch in compacted thickness.

M - Combination Type Road

A road the wearing course of which consists of two or more individual types each being of such depth as to be classed logically as a part of the traffic bearing road surface rather than as surfaced shoulders.

Bridges

Structures of over 20 foot span, including both stream crossings and grade separations.

Z - This indicates that a bridge constitutes the entire project.

Column 9. SURFACE THICKNESS - This column shows compacted surface thickness carried to the nearest one-half inch. For dual-type, (M), the thickness of center portion of the road is used.

Column 10. BASE THICKNESS - The thickness shown is the weighted average over the entire section.

Column 11. SURFACE WIDTH - This column shows actual surface width of oil or gravel.

Column 12. ROADWAY WIDTH - This column shows actual roadway width.

Column 13. ROUTE - This column shows the centerline length of each project and is further explained by the junction diagrams.

Column 14. CONSTRUCTION - This column shows actual constructed length.

Column 15. UNIMPROVED - This column shows the surveyed or estimated length of unimproved sections.

Column 16. WYE - This column is for recording lengths of additional wyes at junctions. Any mileage therein should be added to that in Column 14 to obtain the constructed length of the project.

Columns 17 to 21, inclusive.
These columns show the administrative area within which each section lies. (Municipal mileage is all mileage lying within city limits of incorporated cities and towns, rural mileage being that lying outside of such limits).

Column 22. COINCIDENT - This column shows coincident mileage, that is, when two routes traverse identical alignment, mileage is included in the route having the smaller number.

Column 23. ACCUMULATED ROUTE MILEAGE - This column shows the accumulated mileage along the route.

JUNCTION DIAGRAMS

Y and T, as noted in Remarks Column of the Road Log, have reference to the type of road junction.

The accompanying diagrams explain our method used in calculating route and construction lengths of various projects.

In Case 1, that of a "Y" junction, the construction or maintenance length of FAP 271 A is from Station 0 + 00 to Station 324 + 00, plus the Wye from Station 1+ 00 to 2 + 00. The route length is from Station 0 + 00 to Station 325 + 00.
